Technology Alone Doesn't Stop Threats— People Do

Traditional screening systems may not always give the full picture. They can provide limited information beyond basic alerts, placing greater responsibility on security personnel to interpret and respond with limited context. When systems aren't cloud-connected to analytics tools or broader security infrastructure, security teams can lack situational awareness and access to real-time insights needed to act with confidence.

From Alert to Action—Enabling Security Decisions

Evolv takes an end-to-end approach to security, designing systems that not only detect threats but also empower operators to resolve them with confidence.

Evolv provides a **cloud-connected, AI-driven approach to security** that goes beyond security hardware, **supporting the end-to-end screening experience**. Our focus is weapons detection, and we offer two core solutions: **Evolv Express®** and **Evolv eXpedite™**—designed to efficiently screen high volumes of people and bags for concealed threats.

Our solutions aim to strike a critical balance—consistently detecting potential threats while distinguishing them from many common everyday items*—designed to deliver strong security with an efficient screening experience. But detection is just the foundation. We support security teams throughout the entire screening process, including secondary screening, by:

**Based on internal testing and third-party testing commissioned by Evolv evaluating detection performance and false alarm rates of Express and eXpedite for a variety of threats, benign items, and bag sets. Testing conducted in controlled environments. Detection and false alarm rates may vary based on Express sensitivity settings and venue policies.*

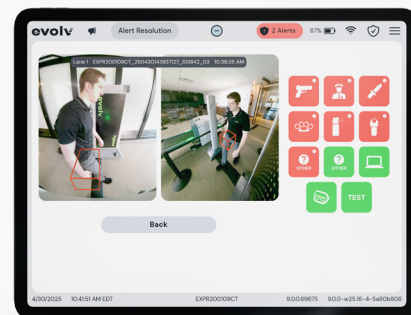

1

Using depth cameras to **provide a clear, real-time visual image** of who alerted, helping security personnel know exactly **who to focus on**.

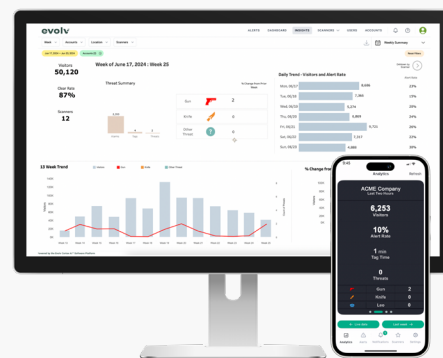

2

Pinpointing the location of a potential threat on a person by placing a “Red Box” on the individual to support **where to search in secondary screening**.

3

Delivering a connected screening experience, integrating into a security ecosystem with cloud-based updates and remote system management.

When choosing Evolv, security teams don't just receive alerts on threats—they gain situational awareness and tools to support their response. And they gain a security partnership to support their success with a dedicated team for long-term success (not a catalog purchase), setup and training, health checks, and beyond.

Transforming the Way People Move Through Life

Evolv partners with schools, hospitals, performing art centers, stadiums, arenas, and other venues to offer a modern solution for security professionals seeking to balance safety with a positive visitor experience.

The Evolv Safer Experience System™ provides a connected IoT system that combines intelligent hardware, cloud-based analytics, and integration with other systems to deliver insights and data-driven security operations.

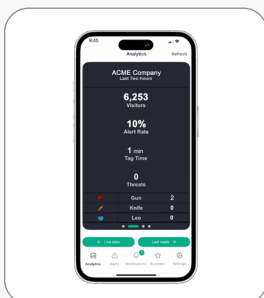

Evolv Express® is designed to enhance security by detecting concealed threats and guides swift threat resolution by providing visibility into who to search and where to search via a “Red Box” on the connected Evolv tablet.

Evolv eXpedite™ aims to offload some of the burden on security teams by using advanced AI and high-speed X-ray imaging technology to autonomously detect potential threats concealed in bags.

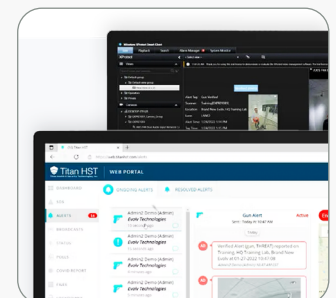

Evolv eXpedite works with **Evolv Express** to provide a layered approach to concealed weapons detection in high clutter bag environments, aiming to allow the checkpoint to operate at heightened sensitivity.

MyEvolv and Evolv Insights® is designed to provide security teams with powerful web and mobile control over their systems along with visual dashboards, analytics, and regular automated reports intended to drive operational efficiency.

Evolv provides pre-built integrations with VMS, Access Control, and Mass Notification providers to help extend existing security ecosystems. Teams can also create custom integrations with Evolv's Open API.

Reviews From Evolv Customers

"We've had a couple situations where we've uncovered multiple weapons on one person...Knowing where the threat is located helps enable our staff to deescalate the situations. **It makes security screening non-intrusive and seamless.**" – Manager of Security Services, Southern Ohio Medical Center

"We're not buying a technology for today, but rather **a solution that improves over the lifespan of our investment.**" – Superintendent, Niagara Falls City School District

"...We also looked at some other non-metal-detector alternatives. We really did our homework to help ensure that if we selected the Express system and brought it online, it would **deliver the results we expected.**" – Sr. Director of Security, SoFi Stadium and Hollywood Park

"We can focus on just the directed area when we guide guests into the secondary screening area. This helps ensure we are **more effective in our jobs while delivering a better experience to the guest** who was flagged." – Sr. Security Shift Manager, Emerald Queen Casino

"Evolv helps **lift the burden off the shoulders of coworkers**, empowering them to treat patients while continuing to **feel safer**, knowing that Evolv helps reduce the potential for harm to both coworkers and patients served." – Clinical Mgr., Emergency Department, Mercy Health
