Evolv's Solutions for Efficient Screening

- **The Evolv Safer Experience System™** offers connected security solutions designed to detect threats and empower staff to resolve them with confidence. It aims to deliver strong security with efficient screening experience for worshipers, religious leaders, and staff.

Evolv Express® uses advanced sensor technology and AI to reduce the need for invasive personal searches and allow worshipers to move through screening at their natural walking pace.

- **Advanced Detection:** Consistently detects many concealed threats and distinguishes them from many common everyday items.*
*Based on internal testing and third-party testing commissioned by Evolv evaluating detection and false alarm rates on a variety of threats and benign items across sensitivity settings. Testing conducted in controlled environments. Detection and false alarm rates may vary based on sensitivity settings and venue policies.
- **Efficient Screening:** Can screen up to 4000 people per hour in a dual-lane system, or 1000 visitors in 15 minutes*
*Throughput is dependent upon venue sensitivity settings and resolution process.
- **User-Friendly:** Provides staff and volunteers with visibility into who alerted and where to search, aiming to help reduce bias. Designed to help operators reduce search time and speed up alert resolution. Intended to be user-friendly for security and non-security professionals.

Evolv eXpedite™ complements Evolv Express® by autonomously identifying concealed threats in bags using AI and high-speed X-ray imaging technology.

- **High Speed X-Ray Imaging:** Designed to allow worshipers to place their bags on the X-ray belt, walk through Evolv Express at their natural walking pace, and proceed swiftly upon clearance. Can screen up to 2000 bags per hour*
*Testing conducted by Evolv in a controlled environment. Results represent maximum practical throughput based on a FAR of 9% or less, based on 10-minute intervals. Throughput may vary based on a venue's bag policy and alarm resolution process, visitor walking pace, and alarm rate.
- **Automated Decision-making:** Staff do not have to interpret x-ray images or decide when to stop the conveyor belt.
- **Easy to Operate:** If a threat is detected, the green lights on eXpedite turn red and the conveyor belt automatically stops. Alerts can be sent to the Evolv Express® tablet providing the bag's image to highlight the bag containing the potential threat and further x-ray image detail to aid resolution.

Trusted
Nationwide

- **MyEvolv & Evolv Insights®** is designed to provide powerful web and mobile control over Evolv systems along with visual dashboards, analytics, and regular automated reports on visitor flow, alarm statistics, and system performance. This helps strengthen security and drive operational efficiency.
- **Stay In Control:** See security activity and alerts from anywhere.
- **Prompt Adjustments:** Change scanner settings in real time without standing next to it.
- **Actionable Insights:** Access data and analytics to track trends and improve security performance.

Working to Create Safer Experiences for Millions Worldwide

Evolv works to keep public gatherings safe. We have provided screening for Houses of Worship, City Events, Performing Arts Centers, Sport Arenas, and more.

“From the very start, it has been clear that Evolv is focused not only on security but the patron experience. This dual focus is what sets Evolv apart from other solutions.”

— Mark Heiser, Venue Director, Denver Performing Arts Complex

Grant Support for Security Enhancements

Houses of worship may be eligible for federal funding through the Nonprofit Security Grant Program (NSGP) to support physical security improvements.

- **Use of Funds:** Security-related activities such as equipment, planning, and training.
- **Eligibility:** 501(c)(3) nonprofits with religious, charitable, or public safety missions.
- **Application:** Submit through FEMA GO; check with your state for deadlines.
