

Evolv Express® Request Assistance

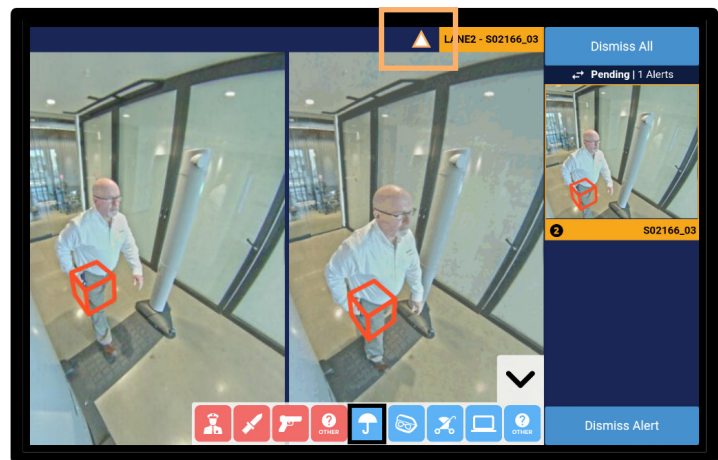

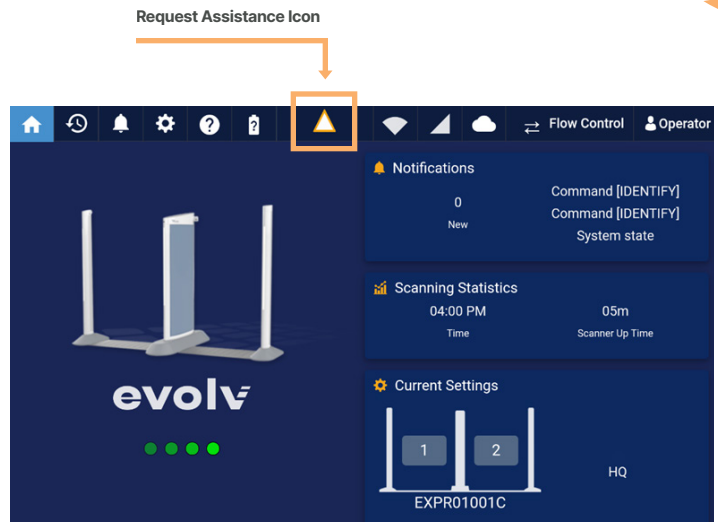

Enhance Your Security Response with
Integrated Communications

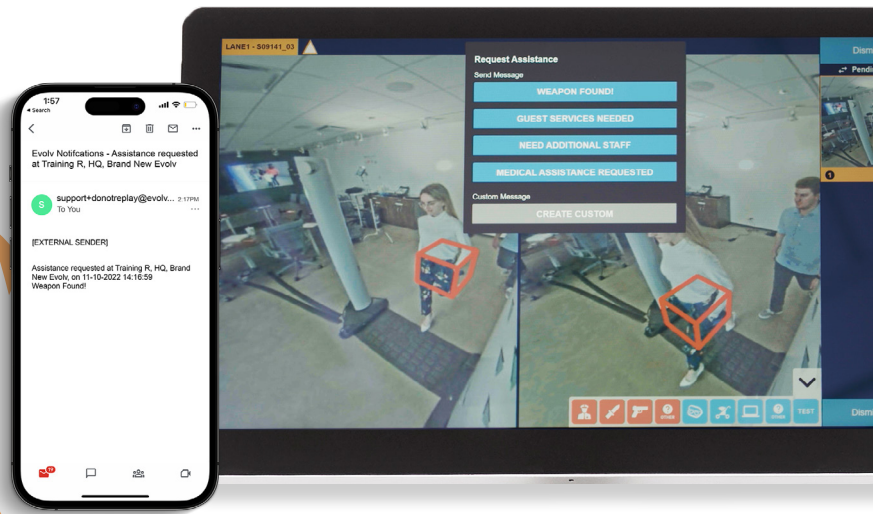

Seamlessly Integrate Critical Communications with Weapons Screening Technology

A host of technologies, processes, and protocols for venue security are available to your teams. But seamlessly integrating the most critical communications into your current process and technology landscape shouldn't be a burden. When your staff needs to reach out across your existing security ecosystem—for help from other team members, supervisors, or adjacent teams like law enforcement—communications should happen as soon as your staff, and your guests, need it.

Introducing Evolv Express® Request Assistance

Ensuring a frictionless guest experience while achieving unparalleled levels of security by detecting weapons at your entryways is the work of Evolv Express. But our technology relies on your people and processes for successful issue resolution. And when your teams need extra help to complete this work, whether because of visitor overcrowding, staffing constraints, a guest health emergency, or an escalated threat situation that needs additional personnel to resolve, it is critical to leverage your existing security processes and systems so that help can arrive as soon as possible. With Evolv Express Request Assistance, this communication happens in seconds. And by integrating seamlessly with your existing processes and technologies, Request Assistance means the right resources can help your teams, and your guests, as soon as possible.

Only Evolv Express® Request Assistance Offers

Critical Communications: Quickly send requests leveraging the teams and protocols you define. Create up to five predefined messages that can be sent (or four plus a free-form message of up to 100 characters).

Discreet Outreach: At the touch of a button in the user interface, help is summoned—allowing your teams to reach out without visitors knowing.

Rapid Alerts: Address crowding, health issues, staff constraints, or escalated threat situations and streamline your critical response time.

Seamlessly Integrated: Easily send Request Assistance messages and Express location information to security systems integrated with Express.

Target Critical Assistance: Request Assistance automatically includes the location where help is needed and allows for customized messages from the team member in need.

Instant, Discreet Messages Sent to Systems and Personnel You Assign

Request Assistance integrates communications sent from Evolv Express with the personnel prescribed by your security protocols, extending your security ecosystem and adjacent technologies to include your venue’s entryways. With a simple touch, communications are sent discreetly from any Evolv Express tablet via SMS text or email or to any integrated security system. Evolv Express automatically includes the entry location of the system requesting assistance, along with a predefined or customized message from the team member in need. Request Assistance ensures that the personnel staffing the most critical positions in your venue—weapons detection and screening—will be able to leverage existing protocols for critical communications to get the help they need and better secure your entryways, quickly.

Easily Configured by You

The MyEvolv Portal offers an intuitive, straightforward way for your system administrator to configure which staff members receive these requests. Simply configure email addresses and / or SMS notifications and “subscribe” the right personnel across your security team, venue management, and adjacent staff to receive alerts and Evolv seamlessly orchestrates the rest. Configure predefined messages that operators can send with a single button press and enable customized messages—ensuring the right assistance reaches them, and your guests, as soon as it is needed.
